

(a) Candidate construction

Frozen CLIP patch features
 $K = 8$ clusters per image
Mask selected attention-key
columns in each block/head
CCI: maximum target drop

(b) Selection-stage probe

One selection prompt
Retain candidates within
 ε of CCI's target drop
WF: largest worst-foil margin
within this feasible set

(c) Held-out evaluation

Three evaluation prompts
Region held fixed
Worst-foil specificity
Target-score response
BBox precision

Selection uses no held-out responses; oracles inspect held-out candidates only for diagnosis.
